The screenshot shows a development environment. On the left, a Git CMD window displays the contents of a package.json file for a project named 'npm-lab'. The file includes version '1.0.0', main 'index.js', and scripts for 'start' (node index.js) and 'dev' (nodemon index.js). It also lists dependencies like 'axios' and 'express', and devDependencies like 'nodemon'. The repository is set to 'git' with a URL pointing to a GitHub repository. The terminal below shows the command 'C:\Users\chandan\npm-lab>node index.js' being executed, resulting in a server running at 'http://localhost:3000'. On the right, a web browser window shows the application running at 'localhost:3000/api/info', displaying a JSON response: { "name": "NPM Lab", "subject": "Open Source Technology", "semester": "BE 6th Sem" }. The browser's address bar shows 'localhost:3000' and the page title is 'Pretty print'.
